Patent information

- what is it?

Patent information is vital to a broad range of professions from technical developers and researchers to legal advisers and business strategy managers.

Patent information is the name we give to the technical information you find in patent documents, plus any legal information about them.

- why use it?

There are many good reasons for using patent information. More than anything else, it can help you make informed decisions when choosing strategies for researching or developing new products.

You can use patent information to:

- **Find out what already exists and build on it**
If you are faced with a technical problem, there is no better way of finding out what solutions already exist than by looking at patents.
- **Keep track of who's doing what**
The technical details of research being carried out by your competitors may well appear first in a patent document, long before the product reaches the marketplace. By monitoring patent documents you can keep an eye on your business competitors, or even locate potential partners. You can also use patent information to identify patents that are no longer in force and can be freely used. Finally, by watching patent publications, you can spot trends in technology or the market at an early stage.
- **Avoid infringing other people's patent rights**
Before you put a new product on the market or offer a new service, you need to make sure that you will not be infringing someone else's patent. Patent information will help you here too.

- how is it available?

We want to make it as easy as possible for you to access our patent information services.

What is a patent?

A patent is a legal title which protects a technical invention for a limited period. The patent enables its owner to exclude others from exploiting the invention in the territory for which it has been granted.

Patents are always published, so that everyone can benefit from the information they contain.

Patent documents consist of:
- a first page containing basic

Patent information products and services

Patent information falls into two categories:

- technical information
- legal information

Almost all our internet services are free of charge. Pricing information on our other products and services is available on the [Pricing and ordering page](#).

Technical information

[Technical information page](#)

The European Patent Office has been collecting patent documents from all over the world for more than 25 years. The amount of technical information contained in our patent documentation collection is phenomenal, and our databases are probably the largest single source of information on technology in the world today.

■ Online services

■ Optical discs

■ Paper

■ Services

Legal information

[Legal information page](#)

In addition to being an invaluable source of technical information, patents also have an important legal dimension. While the contents of the patent document itself tell you exactly what the invention is that is being legally protected, patent information goes further than that: it can show you where in the world a patent has been applied for, if a patent was in fact granted, if there is still time to challenge it, and whether or not the patent is still in force.

The screenshot shows the 'Patent information' search page of the European Patent Office. The page features a navigation menu with 'Home', 'Contact', and language options 'Deutsch', 'English', and 'Français'. A search form titled 'European Publication Server: Search' is the central focus, containing fields for 'Publication number' (EP 1477563), 'Application number' (EP 04011223), and 'IPC symbol' (C12N). It also includes date selection options for 'Year' (2004, 2005) and 'Week' (1, 38), and a 'Kind' section with checkboxes for 'Select all kind codes', 'A1/A2', 'A3', 'A8/A9', 'B1', 'B2', and 'B8/B9'. A 'Search' button and a 'Reset' button are located at the bottom of the form. On the right side, there are sections for 'Additional information on European Patent documents' and 'Useful links'. A small yellow box at the bottom right contains a message from Curt Edtall, Vice-President DG 4 of the EPO, accompanied by a small portrait photo.

Welcome to esp@cenet Europe's network of patent databases

Dear esp@cenet user,

We began our programme of roadshows for 2005 with two one-day events in Ireland. The Dublin Institute of Technology was our host, and provided a well equipped computer training suite. Over two days in February, more than fifty scientists, academics, patent agents, and tech. transfer specialists participated in intense programmes using esp@cenet to search, retrieve and study patent documents. A typical roadshow familiarises the participants with the basic search functions and database coverage of esp@cenet. Then the pace quickens and advanced search functions such as ECLA search are introduced in prepared case studies. The participants are later assigned open-ended, but tough, exercises to test their newly gained knowledge. The day ends with an open Q&A session and discussion of participants' own search cases if required. Our aim is always to make the experience memorable, relevant and fun. The roadshows are complemented with comprehensive documentation about

Welcome to esp@cenet®

Dear esp@cenet user,

We began our programme of roadshows for 2005 with two one-day events in Ireland. The Dublin Institute of Technology was our host, and provided a well equipped computer training suite. Over two days in February, more than fifty scientists, academics, patent agents, and tech. transfer specialists participated in intense programmes using esp@cenet to search, retrieve and study patent documents. A typical roadshow familiarises the participants with the basic search functions and database coverage of esp@cenet. Then the pace quickens and advanced search functions such as ECLA search are introduced in prepared case studies. The participants are later assigned open-ended, but tough, exercises to test their newly gained knowledge. The day ends with an open Q&A session and discussion of participants' own search cases if required. Our aim is always to make the experience memorable, relevant and fun. The roadshows are complemented with comprehensive documentation about esp@cenet, patent information, the EPO and patents in general. If you think you could benefit from an esp@cenet roadshow contact Lisa McDonald-Maier or Nigel Clarke for further details.

Latest news

Training programme 2005 now available

Just started out in patents or patent information? Maybe you're already a patent professional and interested in learning more about patent information? Either way, you might like to have a look at our 2005 seminar programme, which is now available online. The comprehensive programme again includes two EPO Patent Information Beginners' Seminars (EPIBS) and a whole range of virtual classroom events.

Ask the assistant

The newly developed [esp@cenet](#) assistant is now ready and can be accessed directly or via the [esp@cenet](#) interface. A variety of short interactive modules help the users and especially the new users of [esp@cenet](#) to get to know and to better use the service. Have a look at it and tell us what you think.

[»more](#)

What can we do for you?

The EPO offers different ways of learning depending on your needs. If you would like to attend a seminar on our premises in Vienna, participate in a training course at a location near you, follow a virtual classroom seminar at your own PC or simply download some reading material, simply click on the link below for more details:

• [Training programme and information](#)

Distance learning

The EPO's distance-learning programme allows you to learn without leaving your desk. Our website contains details of our "virtual classroom" seminars, as well as self-paced web-based learning such as the [esp@cenet](#) assistant, and much more.
