

“The dreaded bugbear of  
transfer seasons”

Steve Papa  
Founder and CEO  
ICIC, October 2007

How are these different?

How are these different?

# RDBMS architecture vs. new class of database

How much would an iPod Nano have cost in the 1970s?

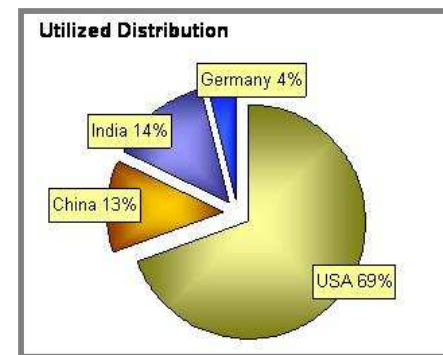

# Structured vs. unstructured data in the 1970s

- Search & the inverted index

- BI and the relational table

A relational table with four columns: StudentID, Name, Phone, and DOB. The columns are labeled as "Attributes" with red arrows. A green oval around the column headers is labeled "Schema". A blue arrow points to a row of data, labeled "Tuple".

StudentID	Name	Phone	DOB
111335555	Matt	555-4141	06/03/70
111224444	Troy	556-9123	01/02/76
999775555	Sean	876-5150	10/31/81
444668888	Christy	219-7734	02/14/84

# Storage is linked to access

**Transfer Last Year's Correspondence in ten minutes by the Safe Guard System**

The Safe Guard System provides for the care of miscellaneous papers so that they are as easily found when wanted as the more important papers which are so conspicuously indexed that they cannot be overlooked.

*Active Files*

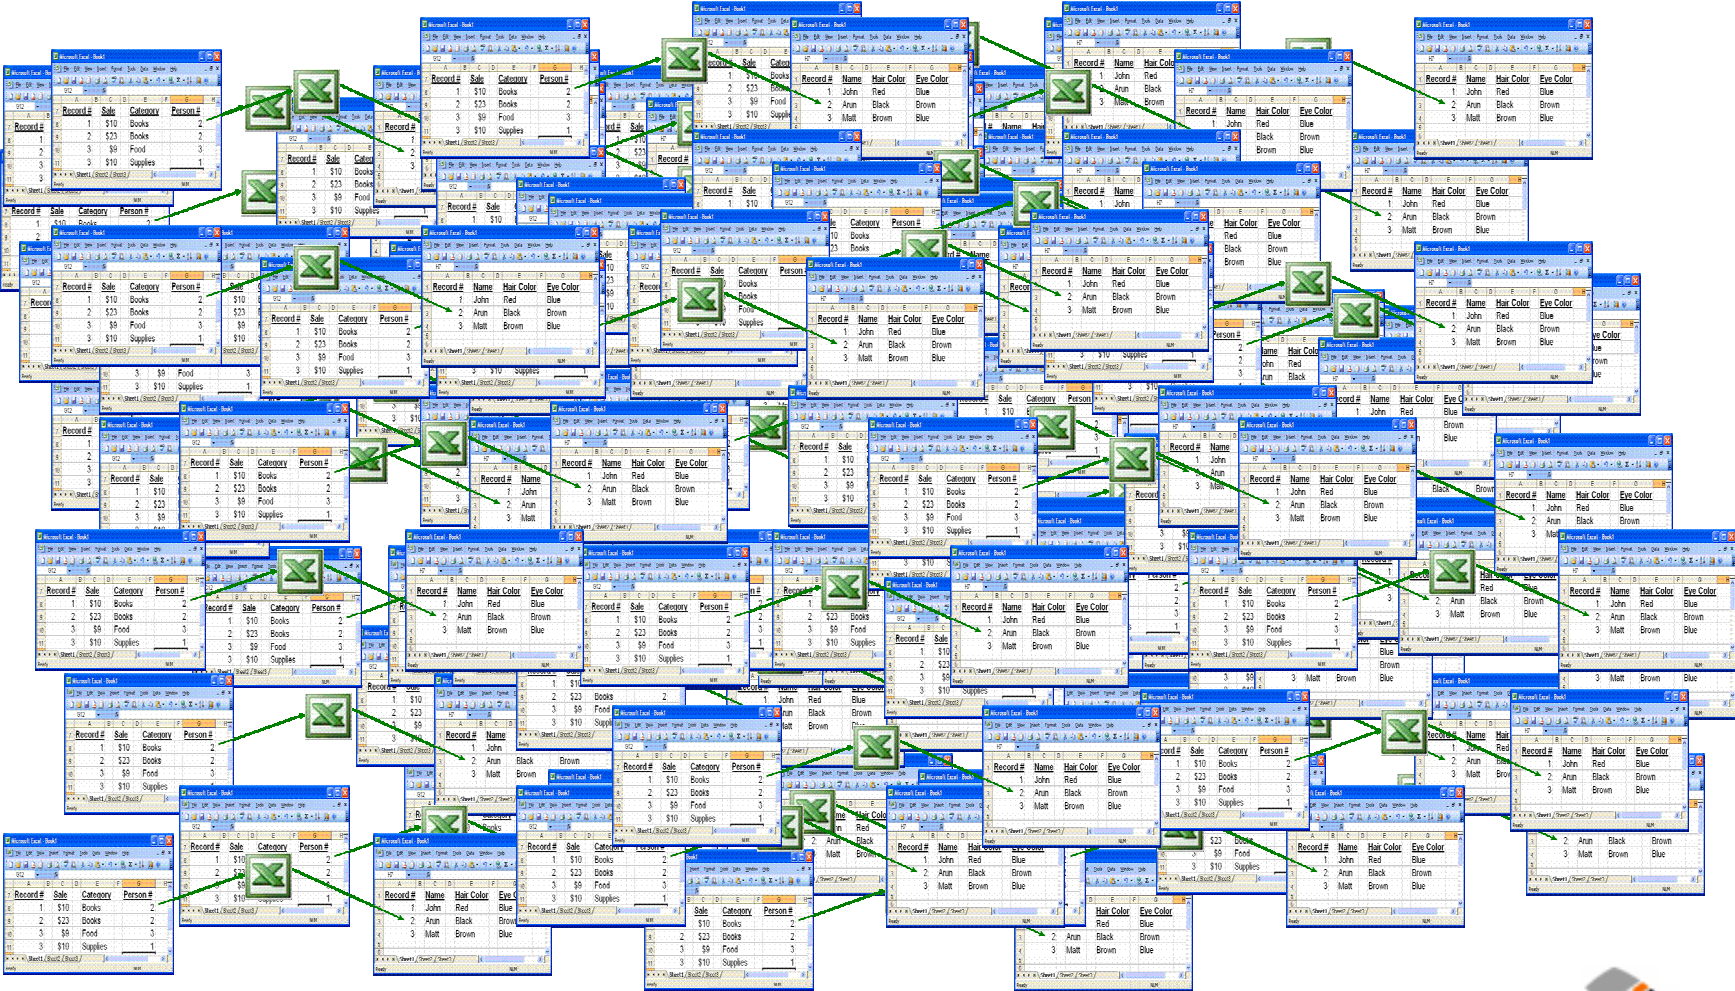

Now—at the beginning of a new business year—is the opportune time to consider its adoption—and thoroughly eliminate for all time to come the dreaded bugbear of transfer seasons.

*Storage Cases*

**Globe-Wernicke**  
← Safe-Guard System →  
**Filing Cabinets**

A duplicate set of Indexed Folders that serve as Guides after the papers are transferred in Storage Cases, economizes both time and money—as the original set of Guides remains permanently in the Active Files.

# Inside of ERP: 15,000 tables

# One size fits all: an idea whose time has come and gone

## “One Size Fits All”: An Idea Whose Time Has Come and Gone

Michael Stonebraker  
*Computer Science and Artificial  
Intelligence Laboratory, M.I.T., and  
StreamBase Systems, Inc.*  
*stonebraker@csail.mit.edu*

Uğur Çetintemel  
*Department of Computer Science  
Brown University, and  
StreamBase Systems, Inc.*  
*ugur@cs.brown.edu*

**“The last 25 years of commercial DBMS can be summed up by a single phrase: “One size fits all.” ... In this paper, we argue that this concept is no longer applicable...”**

of multiple code lines causes various practical problems, including:

- *a cost problem*, because maintenance costs increase at least linearly with the number of code lines;
- *a compatibility problem*, because all applications have to run against every code line;
- *a sales problem*, because salespeople get confused about which product to try to sell to a customer; and
- *a marketing problem*, because multiple code lines need to be positioned correctly in the marketplace.

To avoid these problems, all the major DBMS vendors have followed the adage “put all wood behind one

## How are these different?

- When did the patent on Claritin expire?
- Who authored articles in *Nature* last month?
- What is the average depth of our deep sea wells?
- How can we increase licenses on our IP portfolio?
- Who should I recruit for my lab?
- Where should we drill our next deep sea well?

## Process software vs. people

- When did the patent on Claritin expire?
- Who authored articles in *Nature* last month?
- What is the average depth of our deep sea wells?
- How can we increase licenses on our IP portfolio?
- Who should I recruit for my lab?
- Where should we drill our next deep sea well?

## New kinds of databases emerging

- Flexible schemas for a world in flux
- Cross application silos (HR, CRM, file servers)
- Interactive dialog supports investigations
- Arbitrary filters and searches
- Summarize results with charts, faceted navigation, etc.

## IBM Human Capital Management

- Saved \$500mm in one year (as reported to WSJ)
- Active seat count ~4000 untrained users

# ENDECA PROFESSIONAL STAFFING MANAGER

[VIEW AS WORD DOC](#)

Lacy Schildgen  
Senior Manager, ABC Consulting, Inc  
Lacy Schildgen is a senior manager in the General Business practice of ABC Consulting. His focus is on companies with less than \$3 billion in sales located in the Maryland/DC/Virginia area. He is an expert in strategic consulting and business development with extensive experience in relationship building and negotiation of major deals. He is an assertive, effective communicator with strong personal relationships within the financial services and Internet industries.

**Relevant Experience**  
Mr. Schildgen's accomplishments include:

Lead manager on Preferred Biller project AOL. Effort focused on the delivery of bills electronically through AOL's email service. Currently building value proposition and execution plans to monetize program through value added relationships with the top U.S. billers

Served as one of eight Management Committee members for C2it, Citigroup's email payment service. C2it had approximately 240 employees. Led business development, and provided input for strategic direction of the organization

Co-led the development of the Finance.com vision and subsequent business plan. Vision of the business was to build a personal finance portal where by users would receive objective tools and content to help manage their finances. Citigroup would have owned a minority stake in the portal with others, including the public, owning the majority.

Member of a team that negotiated strategic relationships with AOL and Microsoft. Both deals made the Top 10 list of most important deals in Future Banker Magazine. Combined value to Citigroup was over \$175 million.

Developed plan to leverage CyberCash's suite of services to produce revenue-generating propositions for financial institutions. Execution of plan resulted in 75% of CyberCash's revenue for twelve months.

Developed marketing plan based around advantages to coincide with overall strategic goals. Led marketing effort for financial institutions in North American region, including product positioning, strategy development, and business generation.

Documented payment system technology survey for U.S. Department of Treasury, Financial Crimes Enforcement Network (FinCEN).

Assisted in proposal strategies for joint venture between NationsBank, Bank of America, and EDS, including both pricing strategy and technical issues for proposal.

Researched viability of Wells Fargo's penetration into alternative distribution market place.

Led team in development of business case plan and pre-implementation plan for Royal Bank of Canada and Canadian Imperial Bank of Commerce to use in implementing Mondex Stored Value Card.

Worked closely with BankOne to develop a credit card solution for new merchant, which will be adaptable to evolution of electronic commerce technologies. Created solution that encompassed technical architecture of system and

Résumés

This Professional Services Management Portal is a unifying support system for optimizing decisions across all relevant criteria. Endeeca's unique index can grab data from a variety of systems – in this demo a **resume CMS**, **competencies database**, **project management application**, and **ERP system** – and synthesize a single view from which a broad set of users can easily see tradeoffs and successfully navigate availability. Here we show all consultants and the menus reflect a summarization of their characteristics.

With Guided Navigation, users do not need to know how to ask a question or guess at what is available – they are presented with all the criteria, and their possible values, in dynamic menus. Here, the user selects consultants:

- (1) Available Now
- (2) Bill Rate Less than \$200.00
- (3) Industry Experience in Direct Life Insurance
- (4) Software App Experience with SAP

Notice how the dynamic nature of Guided Navigation automatically points out the only locations where such a consultant is available are India, Spain, and Denmark. Because all menu options are continuously driven off the data – including accounting for previous criteria selections – users are quickly exposed to tradeoffs without having to guess.

Perhaps our project is in the USA and we would prefer someone more local. Perhaps we have some flexibility on the timing, or just need an expert to help with a sales pitch. (1) We can quickly incorporate that tradeoff by adding "Within 2 weeks" (this intuitively establishes an "or" condition). (2) Notice how the "More..." shows up in our menu under Country? (3) One click and we are presented with the full list, now including the USA. But suppose our project is in Quebec, and we were hoping to find someone who speaks french...

(1) Though we misspell "Frunch", data-driven spell correction automatically finds the correct spelling in the body-text of resumes (2). (3) Notice here the integration between search and our dynamic menus tells us that people who mention "French" in their resume, alongside all our other criteria, are only available in India or Spain for this time period. While it may seem like we just executed a search and combined the results with prior SQL calls, it turns out that Endeca's infrastructure is entirely different, delivering a patented, unique and useful capability. When presented with this tradeoff, we may relax our criterion around industry experience...

But this is just one example. The key to enabling this form of decision support is to build and dynamically present every path implied by the data – literally billions of combinations – with the interactive response time required to encourage exploration of tradeoffs. This is just one way that it is very different from search or database technologies, the former of which does not present this context and the latter of which requires a careful anticipation of any presented navigation that precludes this free-form interaction.

For instance, here we start out with a focus on margin and availability, (1) and Guided Navigation helps us discover that there are qualified people (2) available in China and India (3), which the user might not otherwise be aware of...

...bringing us down to 10 options that satisfy our interests. Notice how as we interact with the system, we uncover more criteria (for instance, had we not discovered China, we would not have cared as much about U.S. experience)? This highlights a substantial advantage of interactive Guided Navigation over parametric search systems that require the user to input all criteria at once, and then submit a search. Also, notice how with Guided Navigation, the user is never presented with options that lead to no results found. With parametric search, the user is forced to guess, and those guesses often overlook ideas like China, or yield no results found where there are acceptable tradeoffs. Guided Navigation, on the other hand, helps users optimize their decisions across a constantly changing environment by exposing the options in the data according to criteria meaningful to the user.

Thinking back to the previous screens, remember next to the menus there were parenthetical numbers? These reflected a summarization of the data in each filtered state. These parenthetical numbers – in addition to derived calculations like averages, sums, etc. – can be shown as charts. These visual representations are very different from BI dashboards. They operate from the same core engine technology and are every bit as easy to explore and dynamic as the rest of this system. Suppose we notice China's utilization rate is low...

This cross-tab view delivers some visual cues as to where utilization is suffering, as well as the option to adjust the analysis on the column or row to explore. This “within-set” navigation is more typical of BI systems. However, unlike these systems, no one needed to configure Endeca to anticipate a discreet set of questions in the index. As before, every possible question is available, with sub-second interaction time.

Here we click on the RECORDS tab to get a more granular sense of what is going on. Even without sorting, it is pretty clear that there are a lot of low performance ratings contained in this list. However, a quick glance indicates some anomalies like Naketa, who is rated "1" but is unutilized. A sort will immediately deliver all of these anomalies, should we want to take action to ensure that high-performers get staffed, lest we lose them. But in this case, we decide to look at the aggregates again to see if there is a trend.

## Utilization Rate Breakdown

Graph: **Utilization**  
By: [Country](#) | [Level](#) | [Practice Vertical](#) | [Performance Rating](#)

We find that there is a much higher proportion of poorly-rated consultants in the unutilized distribution than the utilized distribution. Could it be that partners are avoiding trouble-spots? Perhaps we have a human capital development issue that is depressing utilization in Retail within the China delivery center...

Removing the Retail Industry Filter immediately sets these charts back to all of China. It appears the performance rating gap between utilized and unutilized narrows, implying that this preference is mostly at work within Retail.

As before, all Guided Navigation filters are available, and they continue to show the “shape” of the data by providing only meaningful options. Here, for instance, popping up a Bill Rate filter removes options over 200, which do not exist in China.

The key to this summarization is that it is not static, as reporting systems are, and does not require building data models or cubes that anticipate what queries need to be supported, as with ROLAP or MOLAP. While there are tradeoffs as with any system, the core algorithms behind Endeca lift substantial IT restrictions and thereby enable very broad audiences of business users to easily interact with and explore data and content. This empowers line managers to quickly pursue their own insights and optimize their decisions without being constrained by a least-common-denominator infrastructure.
